

I BUILT AN AI EMPLOYEE THAT WORKS WHILE I SLEEP

Agentic AI · Loop Engineering

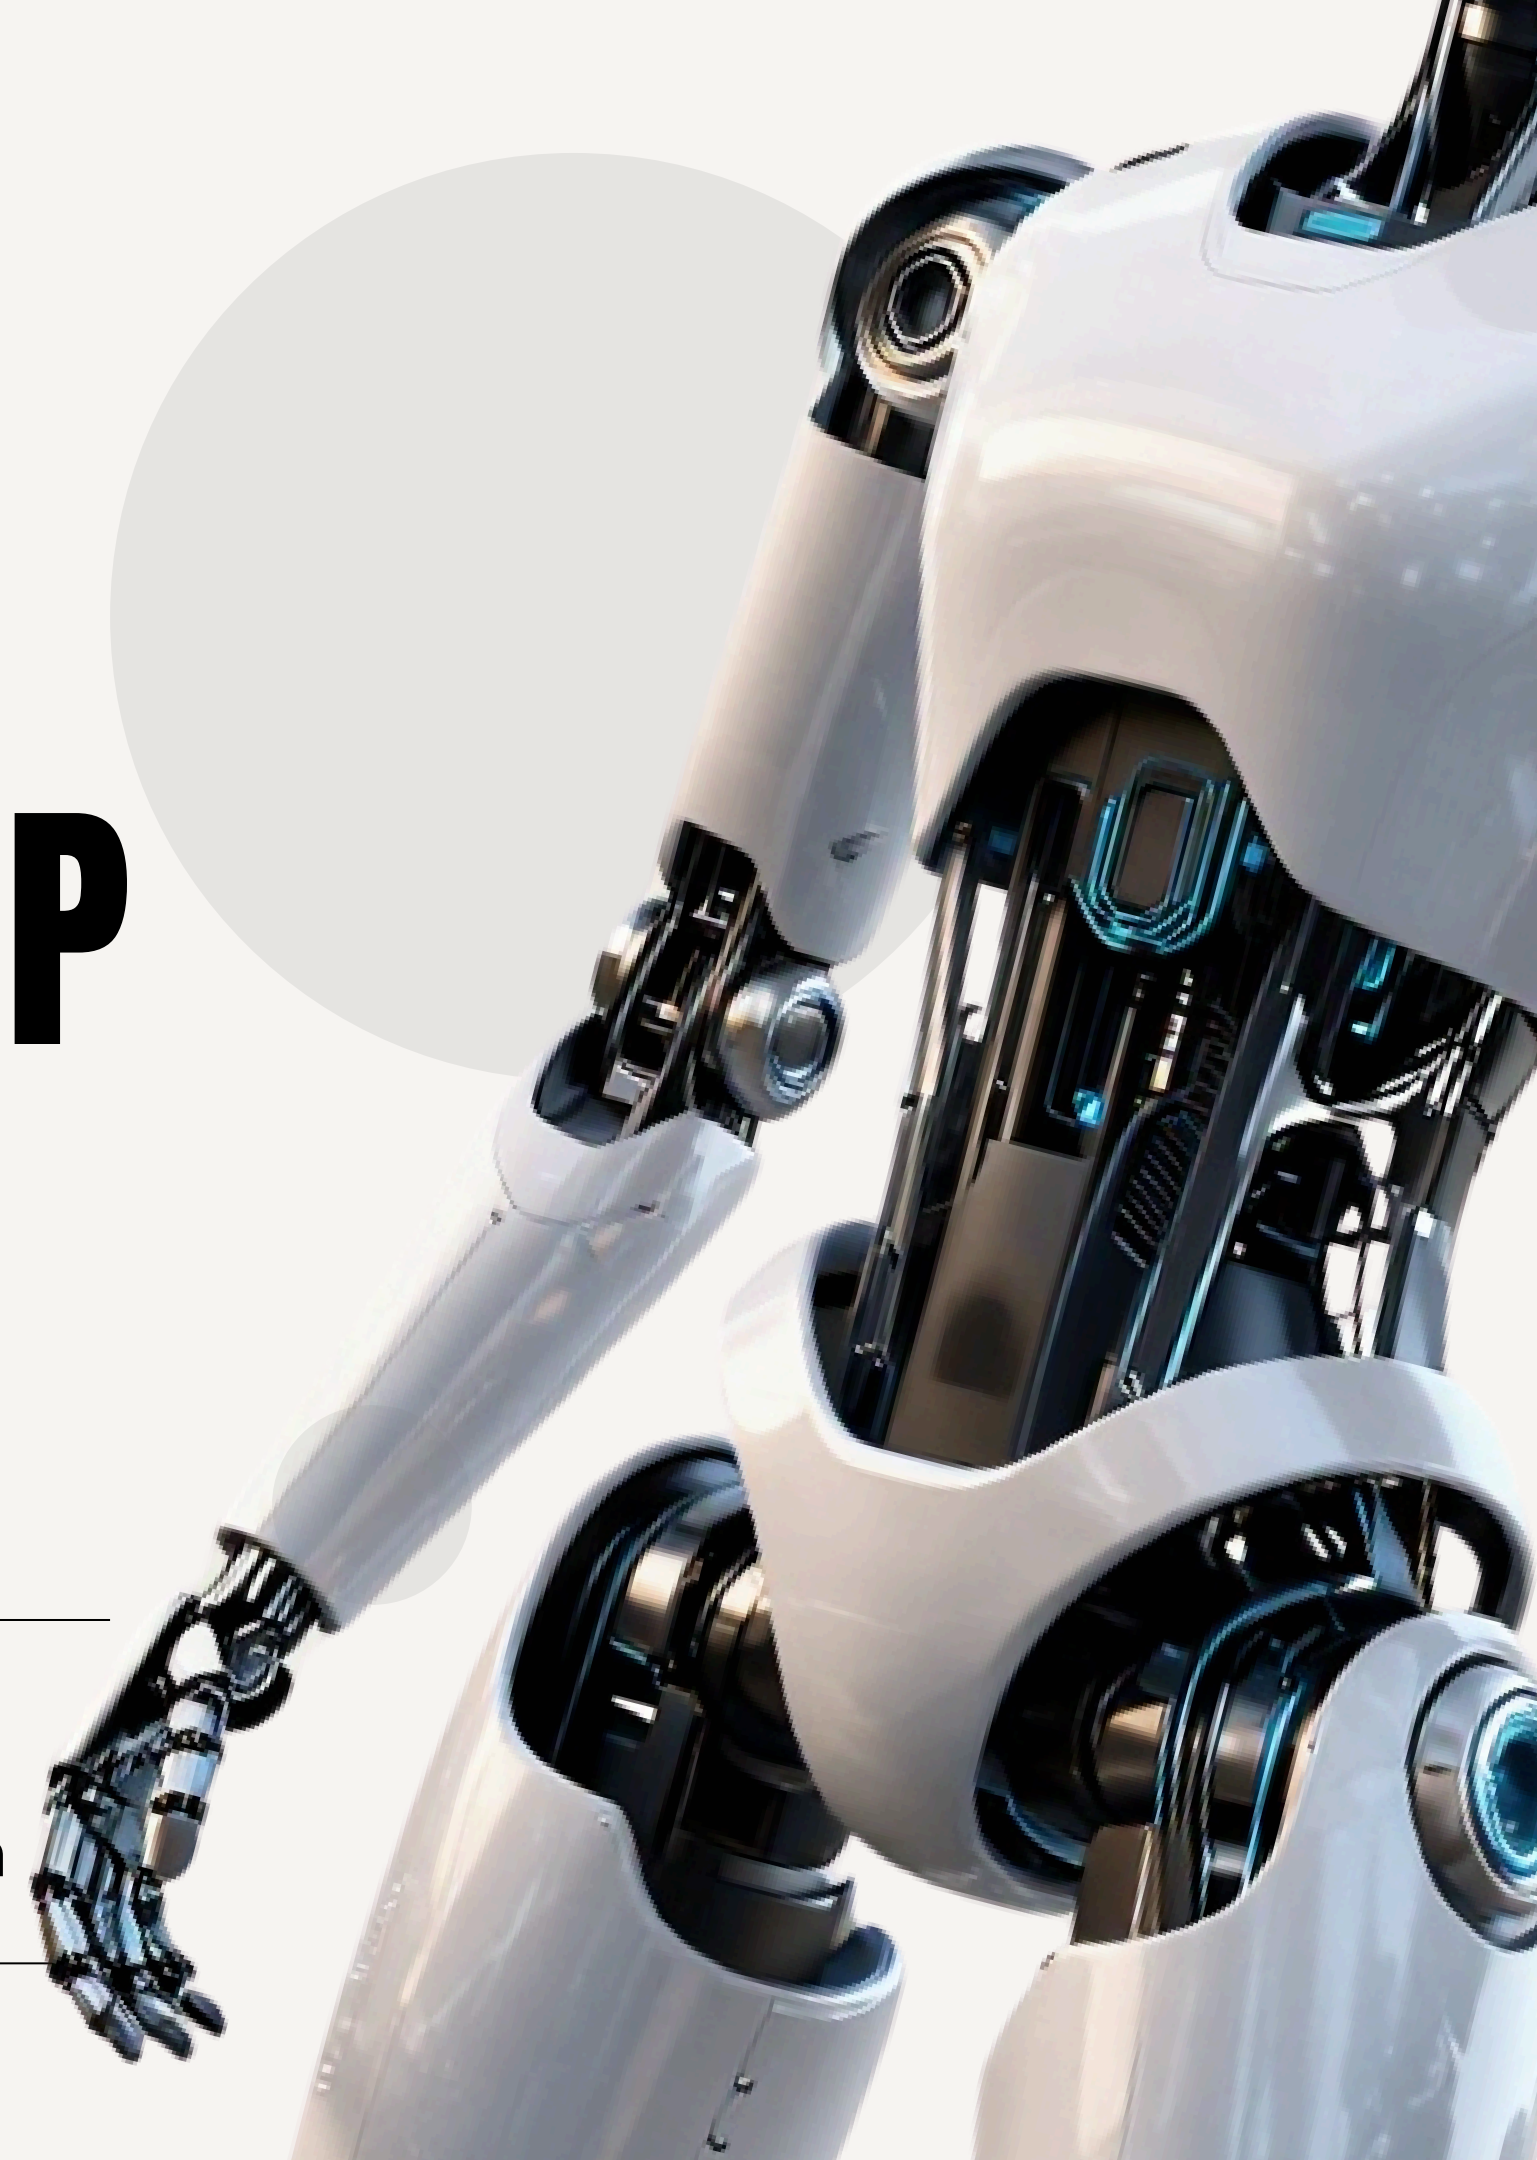

Project By:

Muhammad Shariq

Topic:

AI Daily Briefing → Notion

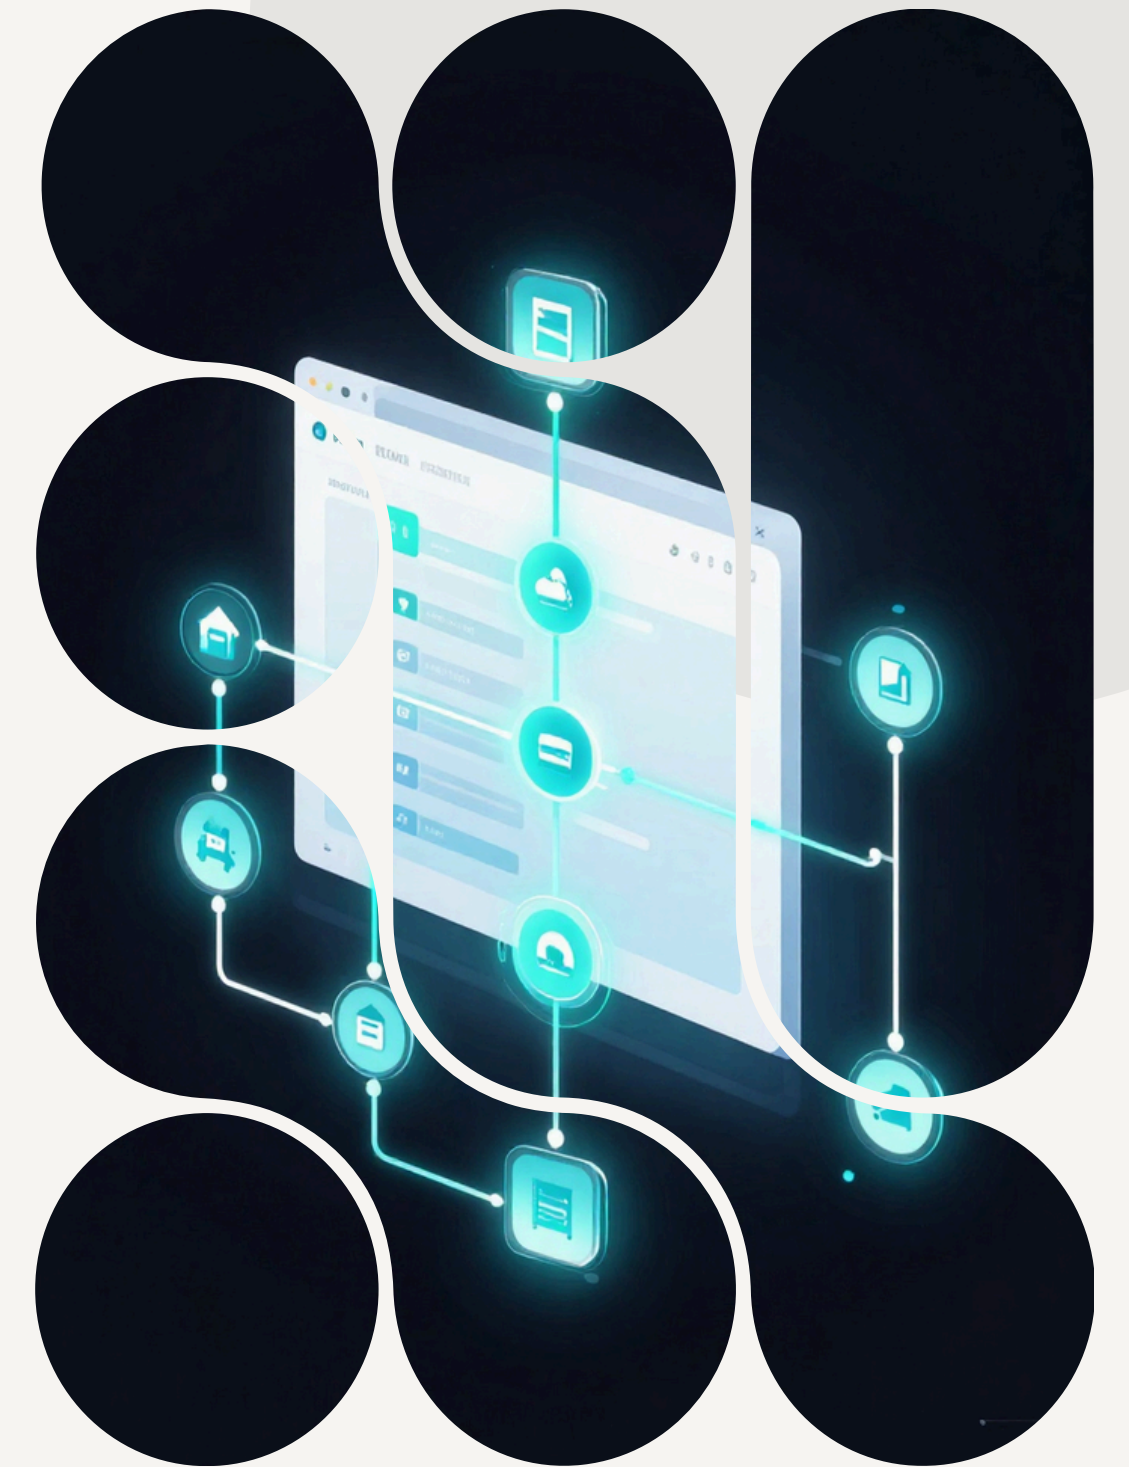

THE PROBLEM

02

Hours Lost Daily:	Manual industry research eats 1–2 hours every morning before real work begins.
Repetitive & Exhausting:	Scanning feeds, newsletters, and blogs every day is tedious and unsustainable.
Generic AI Summaries Guess:	Most AI tools hallucinate or rely on stale training data — not real, verified sources.
No Citations, No Trust:	Without source links, you can't verify what the AI actually found.

WHAT IT DOES

An autonomous AI agent that researches, verifies, and publishes a daily AI-industry news report to Notion — every night at 10 PM (UTC 6 AM), with zero manual effort and no laptop required.

HOW IT WORKS

Four-stage autonomous pipeline
— runs every night at 10 PM PST
with zero manual effort:

01

Heartbeat — GitHub Actions cron triggers at 10 PM PST (UTC 6 AM)

02

Research & Verify — Gemini API + Search Grounding checks multiple sources

03

Draft — SEO-structured Markdown with headings & references

04

Publish — New dated page pushed to Notion database

04

WHY IT'S TRUST-WORTHY

05

Built to Be Verified

Not just smart — accountable and transparent

Cross-Verification: Gemini's Search Grounding checks multiple independent sources before accepting any claim as fact

Transparent Citations: Every report includes a References section with live source links — no hallucinations, no guessing

Safe by Design: Cloud execution via GitHub Actions + human-safe loop-engineering — no runaway processes, no manual intervention needed

TECH STACK:

06

GitHub Actions

Cron-based cloud scheduler — triggers the agent every night at 10 PM PST with zero manual input.

Notion API

Automatically publishes each report as a new dated page inside a structured Notion database.

Google Gemini API

Powered by Search Grounding to verify facts across multiple independent live sources in real time.

Python

Orchestrates the full agentic pipeline — research, drafting, formatting, and publishing — end to end.

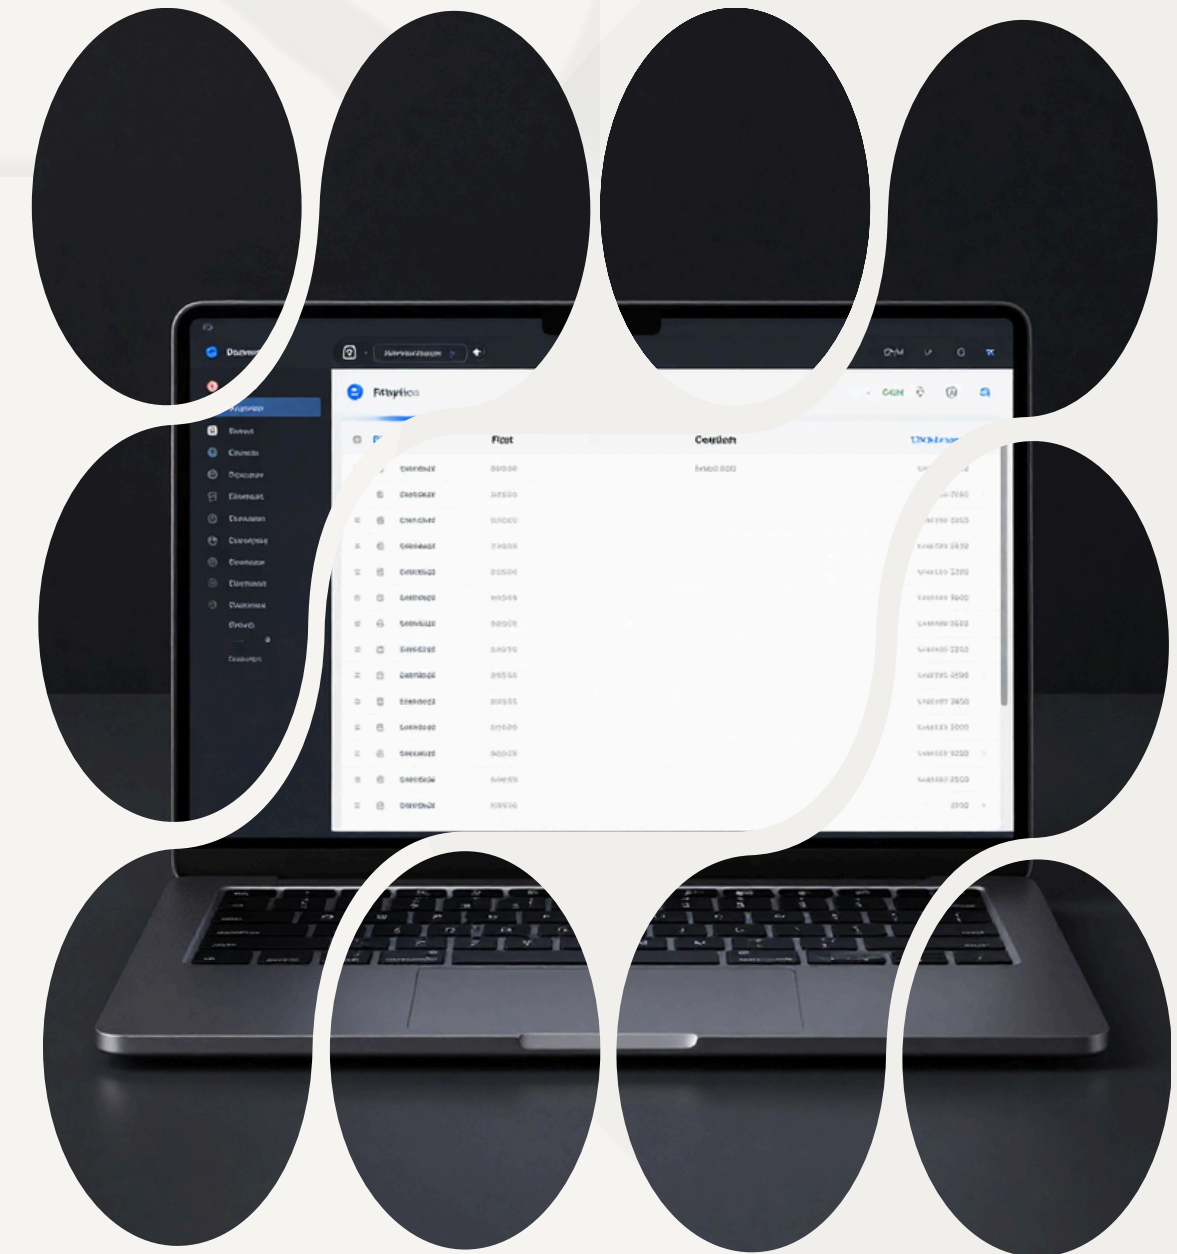

07

LIVE DEMO

See it running live — the AI Daily Briefing agent is deployed and active. Visit the live proof:
